STI / BV Panel Assays

Comprehensive assays for the detection and identification of 28 pathogens using real-time PCR

The burden of morbidity and mortality worldwide resulting from sexually transmitted infection (STI) compromises quality of life, as well as sexual and reproductive health and newborn and child health.¹⁾ More than 30 bacterial, viral and parasitic pathogens are transmissible sexually. Currently, STI diagnosis is various regarding to pathogens.

The multiplex real-time PCR helps early STI diagnosis by detecting multiple pathogens simultaneously in one method. Early diagnosis of STIs, including those without symptoms, is the best opportunity for effective medical treatment and support, and for preventing further transmission.

Allplex™ STI/BV Panel Assays is a multiplex real-time PCR assay that detects and identifies 28 STI/BV pathogens including 4 viruses, 16 bacteria, 1 parasite and 7 *candida* spp. simultaneously. Based on Seegene's proprietary DPO™ & MuDT™ technology, this assay reports multiple Ct values of each pathogen in a single channel using real-time PCR instruments.

Key Features

- Full screening for asymptomatic man or woman
- Simultaneous detection of symptom related pathogens for appropriate treatment of antifungal drugs and antibiotics
- Short TAT (4 hrs) from extraction to the final results
- Providing BV interpretation using quantitative analysis
- Informative data with individual Ct value for each analyte
- Automated data interpretation with Seegene Viewer

Specimens

- Genital swab
- Urine (except BV assay)
- Liquid based cytology (e.g., ThinPrep® and Surepath™)

Compatible Instrumentation

- Automated Extraction & PCR Setup : NIMBUS IVD (Hamilton)
STARlet IVD (Hamilton)
- Automated Extraction : NucliSENS® easyMAG® (BioMérieux)
- Real-time PCR : CFX96™ (Bio-Rad)

Powerful Automation Platform for Complete Test Process

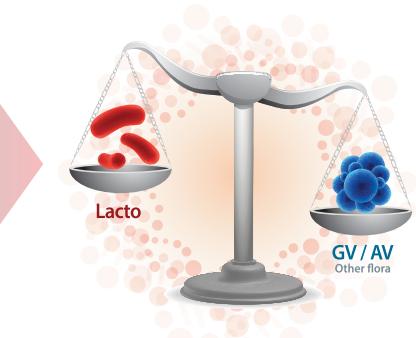

- User-friendly automation system
- Automatic data interpretation software optimized for multiplex assays
- Interlocked with LIS
- Multi-Ct values in a single channel

Allplex™ STI / BV Panel Assays is composed with 4 individual panels. It is useful for initial screening for sexually transmitted infections. In addition, individual panel assay can be elected for effective patient's care.

Quantitative analysis of BV-related bacteria

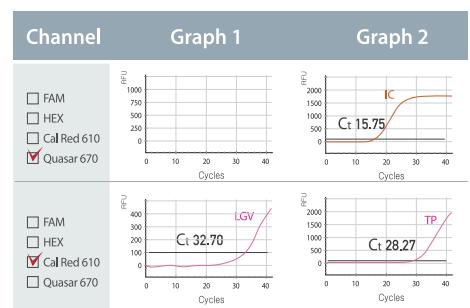

Allplex™ Bacterial Vaginosis Assay provides interpretation of Bacterial Vaginosis by quantitative analysis using standard curve

Result of Allplex™ STI/BV Panel Assays

Seegene Viewer provides integrated results of Allplex™ STI/BV Panel Assays. The result represents co-infection of *U. parvum* (UP), *C. trachomatis* serovar L (LGV), *T. pallidum* (TP) and *C. parapsilosis* (CP) with Ct values, respectively.

One channel, multi-Ct values
